STEPHEN FILLBEY – APPRENTICE CASE STUDY

Twenty-year-old Stephen Fillbey is currently working as a Grade 2 apprentice with Peter Brett Associates, an independent practice of engineers, planners, scientists, and economists delivering major development and infrastructure projects. Alongside his apprenticeship, Stephen is completing a BTEC Level 4 (HNC).

Activate Apprenticeships was the training provider, providing the apprenticeship programme, Sourcing the candidates and providing the training, to ensure it was a great experience – both for the apprentice and the employer.

With an apprenticeship, you gain work-related knowledge earlier than if you had attended college full time. You also gain qualifications that help you progress in your career. I really like how the apprenticeship is helping me develop new skills - from managing time, talking to colleagues and customers, to improving my CAD design skills. I feel like I am constantly learning new features and processes that make my work more efficient.

Doing an apprenticeship has been great for me. I am learning work and career specific knowledge sooner than other college and university graduates. Plus I don't have any debts such as student loan – the opposite, I am getting paid while learning at the same time!”
